1. Reference is made to the following document:

D1: PATENT ABSTRACTS OF JAPAN vol. 011, no.

2. The present application does not meet the
requirements of PCT Article 33(1) because the
subject matter of claim 1 is not novel within the
meaning of PCT Article 33(2).

Document D1 discloses (the references between
parentheses relate to said document):

Radiofrequency filter having a coaxial design
(title), comprising one or more resonators (drawing
1), which have the following features:

- an electrically conductive inner conductor in
the form of an inner conductor tube (drawing 1
(3, 4, 5));
- an electrically conductive outer conductor
(drawing 1, (1));
- an electrically conductive base, which

electrically connects the inner conductor and the outer conductor to one another (drawing 1);

- a cover, which covers the radiofrequency filter with respect to the base and has an inner side and an outer side, the inner side pointing towards a free end of the inner conductor tube (drawing 1);
- a dielectric layer (drawing 1, (11)) with a relative dielectric constant greater than 2 is arranged between the outer side of the cover and the free end of the inner conductor tube (abstract);
- the radial extent of the dielectric layer substantially covers the cross section of the inner conductor tube at its free end (drawing 1), wherein
- the dielectric layer is arranged on or fixed to the cover (figure 1).

Claim 1 is not novel.

3. The present application does not meet the requirements of PCT Article 33(1) because the subject matter of claims 5-17 does not involve an inventive step within the meaning of PCT Article 33(3).

The features of dependent claims 5-17 are only one of several obvious possibilities from which a person skilled in the art would choose according to the circumstances, without thereby being inventive.

4. The combination of features contained in dependent claim 2 is neither known from the available prior

art nor is it suggested by it.

The reasons are as follows:

- the subject matter of claim 2 therefore differs from the known radiofrequency filter by virtue of the fact that:

"the dielectric layer is used **in a receptacle** in the inner side of the cover."

The problem addressed by the present invention can therefore be considered that of achieving a low resonant frequency, a high dielectric strength and a low physical volume.

The prior art does not disclose any document which solves this problem in the same way or would lead a person skilled in the art to obtain the proposed solution from a combination of various documents.
